It so in earth human only doesn’t exist thair have been large volume of species out in earth habitation , from last oxidization period to now nature been more suitable for human , it not facing a phenomenon like last glacier period when human and its development is lower. After humans work transfer to hunter gatherer to agriculture humans life is rapidly change fold. It is now more easy and manageable that human are become civilised. Every time human progress from time line it is seen that humans knowledge is far spreading and creative , we develop system , social design , nation , administration and work and education . Human do everything from learning new ideas.

As human start working for science and research human solve many problems of adjusting life . Now we are more healthy and happy , our time is easily develop in productive goods. As so their are others too in life human from itself managing balance in ecosystem . From every other species humans brain is more useful. Biologically humans mind is more knowledgeful and it further doing learning .And saving life on earth .

Life on earth need solving of the human plus natural problem, and knowledge gives ways for it.
